Mathematical Biosciences

an international journal

Volume 147

R. Manuca, M. C. Casdagli, and R. S. Savit (Ann Arbor, Michigan)
Nonstationarity in Epileptic EEG and Implications for Neural Dynamics 1
Niels G. Becker and Sergey Utev (Bundoora, Victoria, Australia)
The Effect of Community Structure on the Immunity Coverage Required to Prevent Epidemics 23
John Carl Panetta (Erie, Pennsylvania)
A Mathematical Model of Drug Resistance: Heterogeneous Tumors 41
Chris Tuffley and Mike Steel (Christchurch, New Zealand)
Modeling the Covarion Hypothesis of Nucleotide Substitution 63
A. Polaski, R. Chakraborty, M. Kimmel (Houston, Texas) and R. Deka (Pittsburgh, Pennsylvania)
Dynamic Balance of Segregation Distortion and Selection Maintains Normal Allele Sizes at the Myotonic Dystrophy Locus 93
Luke Olsen, Philip K. Maini (Giles, Oxford, United Kingdom), and Jonathan A. Sherratt (Coventry, United Kingdom)
Spatially Varying Equilibria of Mechanical Models: Application to Dermal Wound Contraction 113
Piero Colli Franzone, Luciano Guerri (Allessandria, Italy), Micol Pennacchio (Pavia, Italy), and Bruno Taccardi (Salt Lake City, Utah)
Spread of Excitation in 3-D Models of the Anisotropic Cardiac Tissue. II. Effects of Fiber Architecture and Ventricular Geometry 131
Wai-Yuan Tan (Memphis, Tennessee) and Hulin Wu (Chestnut Hill, Massachusetts)
Stochastic Modeling of the Dynamics of $CD4^+$ T-Cell Infection by HIV and Some Monte Carlo Studies 173
M J. Keeling and B. T. Grenfell (Cambridge, United Kingdom)
Effect of Variability in Infection Period on the Persistence and Spatial Spread of Infectious Diseases 207
Jean-Marie Chrétien (Angers, France) and Gilbert A. Chauvet (Los Angeles, California and Angers, France)
An Algorithmic Method for Determining the Kinetic System of Receptor-Channel Complexes 227
